TITLE : HIGH FREQUENCY GENERATING
DEVICE

ABSTRACT : PURPOSE: To prevent ill influence upon a thin film.

CONSTITUTION: When an arc is generated in a plasma producing chamber 18, the plasma load becomes low impedance, and a serial resonance is generated by a capacitor 23 and inductor 21. A current transformer 22 senses the resonant current due to this serial resonance, and a control circuit 12 restricts the power supplied to the plasma producing chamber 18, so that the arc extinguishes in a short time before it grows.
